

CSL301 : Operating System

LAB- 5

Problem-1

- A system has a Job Generator and a Scheduler.
- The Generator ask for total number of jobs and create jobs containing:
 - Job ID
 - Priority
 - CPU burst time
- The Scheduler reads the jobs from shared memory and executes them according to Priority Scheduling.
- A higher priority number means higher priority.
- The shared memory can hold at most 5 jobs.

Problem-2

Write a C program in which:

- The parent process accepts two numbers from the user.
- The parent sends the numbers to the child using a pipe.
- The child reads the numbers from the pipe.
- The child performs addition, subtraction and multiplication.
- Child sends these results to the parent using second pipe.
